

## Core International Reports (Lived Experience & Family Impact)

### 1. Alzheimer's Disease International (ADI)

*World Alzheimer Report 2024: Global changes in attitudes to dementia*

Global survey data from over 166 countries, including people living with dementia and family carers, focusing on stigma, discrimination, and lived experience. [World Alzheimer Report 2024 | Knowledge Action Portal on NCDs](#)

### 2. Alzheimer's Disease International (ADI)

*World Alzheimer Report 2025: Reimagining life with dementia – the power of rehabilitation*

International case studies and evidence on participation, independence, and family-centred rehabilitation across income settings. [World-Alzheimer-Report-2025.pdf](#)

### 3. Alzheimer's Society (UK, with international relevance)

*The Lived Experiences of Dementia (2025)*

Large-scale lived experience research with people with dementia and carers, widely cited in international policy work. [World Alzheimer Report 2024: Global changes in attitudes to dementia](#)

---

## Qualitative Studies: People Living with Dementia

### 1. Molvik et al. (2024).

*Exploring the lived experience: impact of dementia diagnosis on individuals with cognitive impairment*

**BMC Geriatrics** – qualitative study examining emotional, existential, and identity impacts of diagnosis. [Examining the lived experience of dementia with Lewy bodies through qualitative research: A systematic review](#)

### 2. Mammen & Goldman et al. (2025).

*Examining the lived experience of dementia with Lewy bodies through qualitative research: A systematic review*

**Alzheimer's & Dementia** – synthesis of patient and caregiver perspectives across countries. [Quality of family relationships and outcomes of dementia: a systematic review | BMJ Open](#)

---

## Qualitative & Review Evidence: Families and Informal Carers

1. Pozzebon et al. (2016).  
*Spouses' experience of living with a partner diagnosed with dementia: a synthesis of qualitative research*  
**International Psychogeriatrics** – international qualitative synthesis highlighting relational loss and adjustment. [Exploring the lived experience: impact of dementia diagnosis on individuals with cognitive impairment - a qualitative study | BMC Geriatrics | Springer Nature Link](#)
  2. Bastholm-Rahmner et al. (2025).  
*Living well with dementia: family caregivers' call for more person- and family-centred support*  
**BMC Geriatrics** – qualitative study of caregiver experiences and unmet needs. [Personal Experiences of the Dementia Journey](#)
  3. Oliveira et al. (2023).  
*Quality of life of family carers of people living with dementia: review of systematic reviews*  
**British Medical Bulletin** – global synthesis of carer quality-of-life impacts and determinants. [Living well with dementia: a qualitative interview study on family caregivers' call for more person- and family-centered dementia support | BMC Geriatrics | Springer Nature Link](#)
- 

## Children, Young People, and Whole-Family Impacts

1. Chirico et al. (2021).  
*Children and young people's experience of parental dementia: a systematic review*  
**International Journal of Geriatric Psychiatry** – international review highlighting emotional, developmental, and caring impacts. [A qualitative study of family members' experiences of their loved one developing dementia and their subsequent placement in a nursing home](#)
- 

## Health Inequalities & Global Context

1. Edwards et al. (2018).  
*Quality of family relationships and outcomes of dementia: a systematic review*  
**BMJ Open** – international evidence linking family relationships to lived outcomes. [\[childhood...mentia.org\] Families' lived experiences](#)

2. Leung et al. (2025).  
*Lived experiences of missing incidents in dementia and pathways to care*  
**Age and Ageing** – international perspectives on risk, family distress, and system gaps. [International Journal of Geriatric Psychiatry | Wiley Online Library](#)
3. Alzheimer's Disease International / WHO-linked evidence  
Global estimates and commentary on reliance on unpaid care, late diagnosis, and social impact in low- and middle-income countries. [Dementia statistics | Alzheimer's Disease International \(ADI\)](#)
